Adaptive

AI is generating opportunities

yet realizing AI ambitions at scale has **unique challenges**

AI-enhanced apps

→ **Poor latency** and user experience

Your data

→ **Disparate data siloes** leading to lack of visibility

Foundation models

→ **Lack of business agility** to build and test models

AI infrastructure

→ **High cost** to stand up and maintain infrastructure
Poor performance due to shortage in hardware

Getting AI-ready at scale

is a holistic technology conversation across your entire IT estate

Azure

AI-enhanced apps

Your data

Foundation models

AI infrastructure

- Intelligent apps for **optimal latency and better enhancements with AI**
- Modernized data for **seamless integration into your models**
- **Widest model choice with lowest cost**
- Agility to run on purpose-built infrastructure for **fastest AI performance**

Colocate data, apps, and infrastructure for optimal latency, performance, and cost of AI

Realize AI ambitions at scale when in Azure

1. [IDC Business Value White Paper](#), sponsored by Microsoft Azure, The Business Value of Microsoft Azure for SQL Server and Windows Server Workloads, doc #US49616022, September 202

2. [Microsoft Azure SQL Managed Instance benchmark vs. AWS RDS for SQL Server using Azure Hybrid Benefit pricing](#), May 2022. Comparison also shows that SQL runs up to 5x faster.

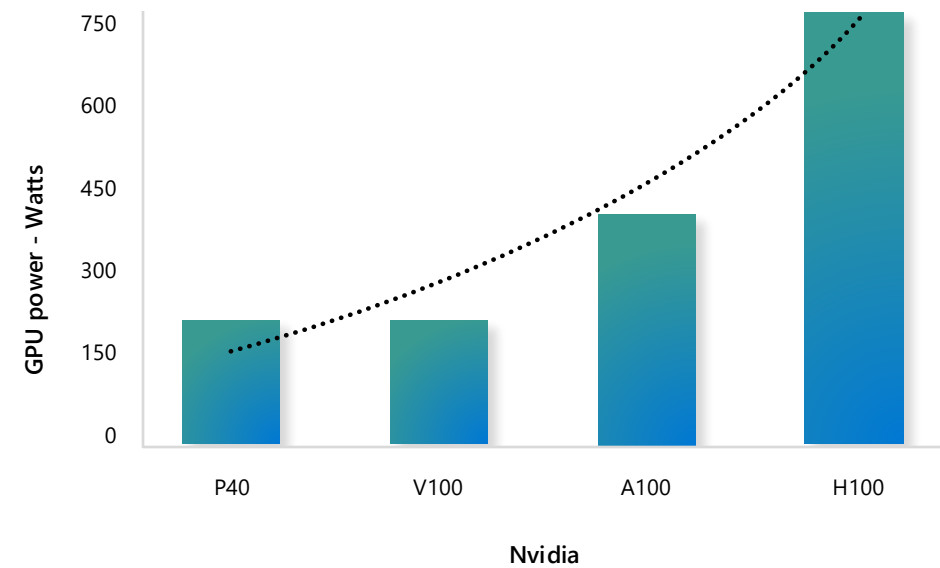

3. Forrester Total Economic Impact™ of Red Hat Enterprise Linux on Azure, January 2024

Power usage in the era of AI

CPU trends

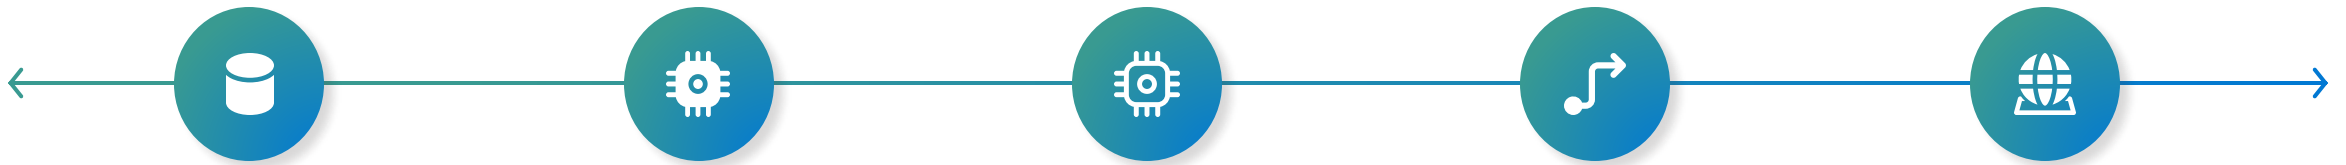

GPU trends

Infrastructure that's optimized end-to-end

Refining every layer from systems to silicon

Datacenters

Enterprise grade datacenters are secure by default with built-in resiliency features for high availability

CPU

Powerful performance to meet requirements across any workload

AI Accelerator

Handle complex AI tasks faster with energy efficient AMD, NVIDIA, and Microsoft's Maia accelerators

Network

Run large scale AI workloads with high bandwidth, low latency InfiniBand and Ethernet based networking topologies

Responsible next-generation infrastructure

Optimizing
datacenter energy
and water

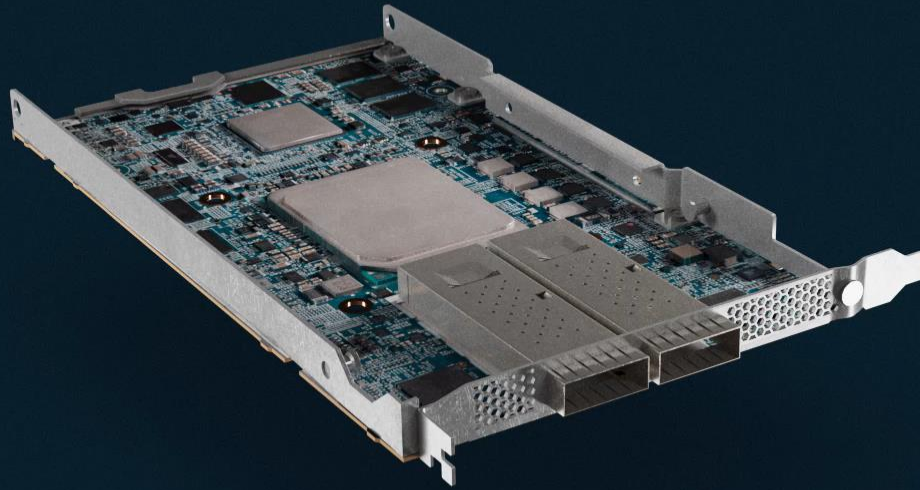

Advancing
low-carbon
materials

Improving
energy efficiency
of AI

Azure Boost

Remote storage up to
12.5 GBps
throughput
650K IOPS

Local storage up to
17.3 GBps
throughput
3.8M IOPS

Up to 200 Gbps networking

Microsoft Defender for Cloud

1. The Total Economic Impact™ Of Microsoft Defender for Cloud™ February 2021, commissioned by Microsoft

Microsoft Copilot for Security

The first generative AI security product that **empowers SOC analysts to defend their organizations** at machine speed and scale

Confidential Computing

Existing Encryption

Data at rest

Encrypt data when stored in blob or disk storage, databases, etc.

Data in transit

Encrypt data that is flowing between untrusted public or private networks

Confidential Computing

Data in use

Protect data while in use, in RAM, and during computation

Protect against

Malicious

insiders or privileged admins

Hackers

exploiting bugs in the Hypervisor/OS

Third parties

accessing data without customer consent

Confidential AI with GPU-enabled confidential VMs

Powerful

Secure

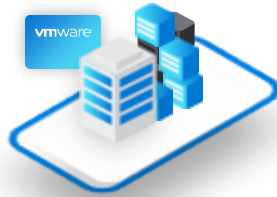

Adaptive

across resources

Top takeaways

Migration to Azure is the first step to achieve AI readiness

Get powerful compute and run on the largest cloud network on the planet for optimal availability, scalability, and resiliency

Azure secures your workloads across the migration journey

Azure supports a diverse ecosystem of applications and services through a single pane of management for your entire estate

Azure is adaptive, meeting you where you are in your cloud journey
